Commissioner of Patents and Trademarks Washington, D.C. 20231

APPELLANTS' REPLY BRIEF

Sir:

The present reply brief apologizes for the erroneous listing of the claims rejected and their basis for rejection flowing from a typographical error. This error is found at pages 2 and 4 of Appellants' Brief. The Examiner is thanked for his correction of this mistake. This reply brief also addresses the Answer's response to appellants' arguments.

At page 3, and numbered paragraph 11, the Examiner's Answer responds to the arguments of the Appeal Brief. This response begins with a statement "The Kosarew reference

updates EPL overlays while they are in operation. See again the discussion in column 1 lines 60-68 and column 2 lines 1-11." The cited text does not support this statement. The text at col. 1 line 60 through col. 2, line 11 of Kosarew is in fact directly contrary to this statement as this text indicates that "Labels are printed sequentially for the records contained in the CDF and are automatically applied to the EPL tags in a continuous process." (emphasis added) In operation, EPLs are typically attached to shelf rails at the edge of the store shelves on which the corresponding products for which they display price information and the like are located. How could labels be automatically applied in a continuous process during EPL operation? The answer is that this cannot be done. Fig. 5 of Kosarew and the discussion at col. 3, line 56 through col. 4, line 57 do show how such automatic and continuous processing can be done as part of a manufacturer "completing a specific merchants order". See particularly, Kosarew col. 3, lines 60-62. The batch approach to addressing of label defects, misapplied labels and the like discussed at col. 2, lines 3-6 of Kosarew is not to the contrary.

The Examiner's Answer then proceeds to cite col. 2, lines 59-68 and col. 8, lines 25-49.

The text at col. 2, lines 59-68 simply describes the ultimate intended use of Kosarew's tags 10. It does not address Kosarew's system or method. The text found at col. 8, lines 25-49 simply states that the tags 10 are distributed to the merchant along with an updated CDF customer data file.

These two textual citations in no way support the Answer's statements that "Even while in operation, new overlays are provided from the batch process and then applied. It may be true that there is a batch process, but this in operation while the EPLs are in effect in the store."

Conclusion

The rejection of claims 1-19 should be reversed and the application promptly allowed.

Respectfully submitted,

Peter H. Priest
